

What are Canadian utilities doing to address concerns relating to electric and magnetic fields (EMF)?

Although the prevailing scientific research has not found a causal link, the Canadian electricity industry continues to support scientific research investigating exposure to electric and magnetic fields (EMF) and any possible long-term health effects.

The Canadian Electricity Association (CEA) and member companies also work to communicate accurate and up-to-date information to the public and employees regarding EMF. CEA continues to hold regular conferences on EMF and human health where international experts, industry and relevant regulatory bodies engage and stay current on the latest related research.
