

## **SaskPower Receives the Prestigious Sustainable Electricity Company Designation™**

Ottawa (November 13, 2019) - The Canadian Electricity Association (CEA) announced today that SaskPower achieved the Sustainable Electricity Company™ Designation. SaskPower is the principle energy supplier for Saskatchewan and has focused on bringing innovative technology to life and supporting their customers since 1929.

Looking ahead, SaskPower is transitioning to a lower-carbon generation portfolio. Towards 2030, the company is focused on collaboration with its stakeholders and partners and affordable electricity for its customers. Their environmental management and social responsibility program enhancements have earned them this prestigious designation.

---

“The Sustainable Electricity Company™ designation reflects a strong commitment in making the electricity sector more environmentally, socially, and economically responsible in its activities. We are honoured to present SaskPower this designation in recognition of all of their hard work and dedication to sustainable power,” says Francis Bradley, President and CEO of the Canadian Electricity Association.

---

Mike Marsh, President and CEO of SaskPower noted that, “Receiving this designation and recognition is an honour. It signals that at SaskPower, environmental sustainability, economic sustainability and social responsibility are woven into our employees’ work and behaviours. It tells our customers and stakeholders that we are committed to working together to create a future of which we can be proud.”

“SaskPower has proven themselves to be a key leader in their sustainability efforts. We are proud to give them the recognition they deserve and hope they serve as an inspiration to other utilities”, comments Janice Garcia, CEA Corporate Secretary and Director Membership and Sustainability.

The Sustainable Electricity Company™ designation was established by CEA for Canadian utilities from coast-to-coast-to-coast to further advance the integration of sustainability considerations in company decision-making processes. The designation requires utilities to conform to the internationally-recognized ISO 14001 standard on Environmental Management Systems and ISO 26000 Guidance on Social Responsibility. Together, they provide a platform for identifying and addressing key strategic sustainability risks and opportunities related to environmental, social and economic issues. In addition, companies must pass an independent external verification.

Visit CEA’s website for more information about achieving Sustainable Electricity Company™ designation and on CEA’s mandatory Sustainable Electricity program.

## About the Canadian Electricity Association

Canadian Electricity Association (CEA) members generate, transmit and distribute electrical energy to industrial, commercial, residential and institutional customers across Canada every day. From vertically integrated electric utilities, independent power producers, transmission and distribution companies, to power marketers, to the manufacturers and suppliers of materials, technology and services that keep the industry running smoothly -- all are represented by this national industry association.
